

## Notice

In order to provide users with the best experience when using the Amaran 100d, we are happy to release a new firmware update (V1.2). This firmware is available for your Amaran 100d via Sidus Link OTA installation. Please install to enjoy the most up to date user experience.

## What's new in this update? (2021-02-03)

1. Optimized fan control modes
  - a. The Amaran 100d will now be able to access two fan modes: Smart & Medium Speed)
  - b. After the update, the constant speed, Medium fan mode will be the default when using the light.
2. Adds the functionality to allow fan mode adjustment within the Sidus Link app
  - a. Users can adjust the fan control mode using the fixtures management menu in Sidus Link.
    - i. At the time of update this feature is only available in Sidus Link for Android, but will come to iOS shortly after
3. Adjust the illumination output for low brightness levels

Note: This version number for this firmware version is V1.2.

Both Android and iOS version of the Sidus Link App support the update

## How to perform the update?

Method: via Sidus Link® App OTA

1. Open the Sidus Link App (If you have not yet installed the app, please do so first).
2. Perform a Bluetooth Reset on the Fixture.
3. Create a scene using the Sidus Link app, and add the fixture to your scene.
4. After successfully connecting to the fixture, tap on the three dots to the right of the fixture name, and select the 'Firmware Update' option.
5. Complete the update
